(54) Abstract Title  
**Beverage dispenser**

(57) A dispenser unit for chilled beverages including a housing (11) for receiving a collapsible bladder containing a beverage and an outlet tap (22) for dispensing the beverage. The tap protrudes through an aperture (16) provided on the housing and is locked into a cradle (20) forming a part of the aperture by means of a slidable holding member (21) which releasably holds the tap in the aperture. The slidable element (21) may include resilient locking legs (60, figures 5, 6) which prevent the element being separated from the housing. The housing may include a removable bladder holder (15). The unit may include refrigeration means.
